

FRONT-END WEB DESIGN & DEVELOPMENT FINAL PROJECT ACCESSIBILITY REPORT

I had faced so many warnings about my website demo. I was able to fix some of them, but some of them I could not change because it would change the code, but in the future, after submitting the assignment I will keep working on them.

For the Courses in the Last 5 Years Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.
- I changed the duplicate “#year” IDs.

For the Curriculum Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.
- I have got rid of the space it wanted me to in one of my links.

For the Faculty Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.
- I could not play with the dt element after dl element in my lists, I would have to add dd. I will fix that in the future.

For the Index Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.
- I have gotten rid of the Stray element `</div>`.
- I changed the duplicate “#opt” ID into a class, so it will not give an error for it.

For the Projects Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.
- I got rid of the “alt” attributes in `<iframe></iframe>` tags.
- I changed the ID “#fieldTitle” into a class, so it would not be duplicate IDs.

For the RequestInfo Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.

For the ScheduleVisit Page:

- I could not fix the image warnings, because that would mean that I would have to change the sizes.
- I changed the ID “#key” into a class, so it would not be duplicate IDs.
- I got rid of the duplicate IDs “#txtName” because I did not use it.
